

Technologent Provides Data Center Integration Solution for Major Telecommunications Company

LAKE FOREST, CA, September 24, 2009 - Technologent, a leading national provider of technology infrastructure solution for Fortune 1000 companies, announced the successful completion of a large data center integration with a major telecommunication company (Telco Company) in California. The Telco Company selected Technologent for the project because of its extensive experience in the telecommunication market, its multi-platform vendor offerings, and its status as a certified Women-Owned Business Enterprise (WBE).

Telecommunications companies are challenged to provide customers with more customized services and convenience, while controlling their own costs. Technologent utilized its in-depth telecommunications industry and technology experience in order to optimize the Telco Company's multi-platform infrastructures in multi-location data centers. To complete this project, Technologent integrated over 500 servers in over a dozen data centers across the nation.

Using proven hardware and software technologies, along with end-to-end professional services expertise, Technologent worked closely with the Telco Company to deliver solutions that aligned their data center infrastructure and supported their business requirements. Technologent's methodology enabled the company to effectively plan the data center integration strategy and validated post consolidation performance.

"Our goal with any project is to reduce infrastructure and maintenance costs and improve service levels for our customers." said Tom Gallaway, President of Technologent. "Our customers are looking for solutions that solve their evolving business needs and that minimize interoperability problems in multi-vendor, heterogeneous storage environments. Our job is to provide those solutions."

Technologent provides a wide range of comprehensive professional IT services designed to maximize their customers' corporate investment and productivity. The company employs a proven methodology for all IT design, procurement, integration and testing. Professional services include assessment, architecture, installation, implementation and migration, and consolidation and virtualization services.
