

# Saving Time & Costs Using Cloud Native, Well-architected & Framework-based Environments

Global Financial Services Company works with AWS Partner Technologent to Drive Efficiency, Increase Automation, and Expand Use.

**COMPANY:** Global Financial Services Company

**INDUSTRY:** Global Financial Services

**COUNTRY:** United States

**EMPLOYEES:** 12000

## ABOUT GLOBAL FINANCIAL SERVICES COMPANY:

The Global Financial Services Company is a global financial services company which builds and offers easy-to-use products and services that bridge digital and physical to give customers choice, security, and reliability, no matter where they are across the globe.

## BENEFITS:

- Modernized existing applications in AWS
- Migrated and transformed on-prem applications into AWS
- Established process for deploying new applications into AWS
- Increased automation around AWS deployments and day 2 operations

## AWS SERVICES USED:

[Architecting on AWS](#)

[Developing on AWS](#)

[DevOps Engineering on AWS](#)

[Security Engineering on AWS](#)

Global Financial Services Company has been moving an increasing number of its applications and services to the cloud and was looking to add additional automation capability in deployments as well as optimized architectures. Application stacks from previous AWS migrations needed to be modernized and optimized and Global Financial Services Company was looking to create additional automation in provisioning and day 2 application component modifications. Global Financial Services Company worked with Technologent to create automation around new application component design and deployment to enable both new application deployments and modernized existing application stacks.

## Providing Automation and AWS WAFs to Optimize AWS Services

A Global Financial Services Company works to help aspiring people and businesses around the world save, spend, and transfer money—empowering more prosperous financial futures for their family, friends, and communities across borders. The company seeks to use digital solutions in its mission to transform and improve the lives of its customers. In 2019, the company wanted to expand and optimize its use of AWS to provide the application platforms and reach of their applications globally.

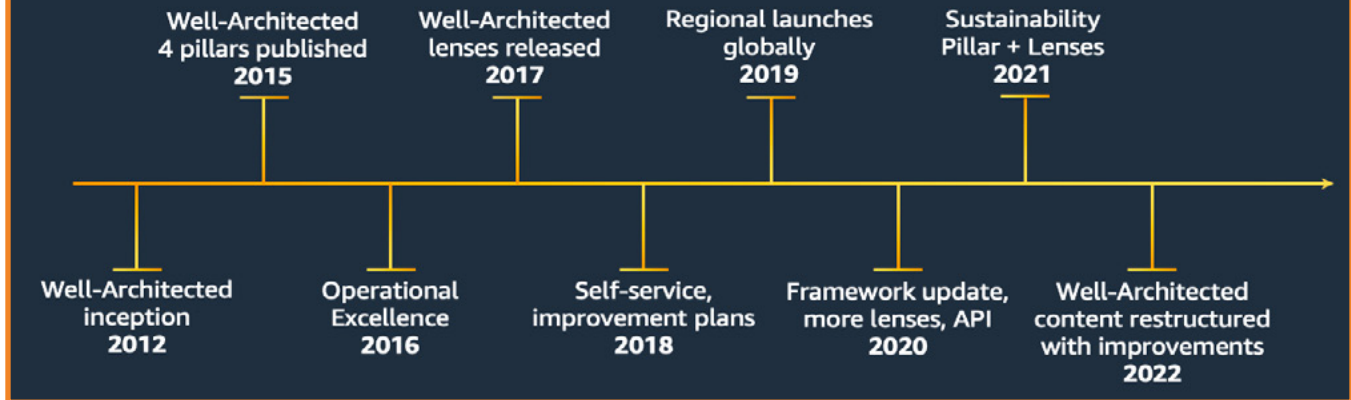

The Global Financial Services Company wanted an IT partner that had experience in transforming applications during re-deployment into an AWS environment as well as capability to automate and standardize those deployments. Together, the Global Financial Services Company and Technologent identified applications and application components for optimizing in AWS as well as applications to be newly deployed in AWS.

## Saving Time and Costs Using Cloud Native, Well Architected Framework based Environments

One of the primary critical services implemented and automated (menu-driven) was API Gateway. This service is used in many of the Global Financial Services Company application deployments and therefore was critical to gain ease of use and widespread deployment capabilities across multiple business groups. In addition, it was critical to create a standard deployment model with appropriate governance including use of tags, as well as the ability to modify the API Gateways in an operational mode.

## AWS Well-Architected Timeline

Standardization of tagging and structure for existing applications was another key use case, as the ability to have well established governance provided the visibility into the cost and performance metrics further allowing the Global Financial Services Company to better manage the operation of various application stacks.

*“Both our internal and external clients benefit from our expanded use of AWS solutions.”*

—Vice President of Cloud Strategy, Architecture, and Engineering

### Using AWS to Further Optimize Global Financial Services Companies Operations and Offerings

The Global Financial Services Company plans to continue to leverage AWS Cloud Services to optimize the operating environments for its applications as well as developing new and innovative offerings for its customer base. The Global Financial Services Company firmly believes leveraging AWS allows them to continue to offer premium financial services globally and in addition provides a platform that allows them to rapidly create and launch applications to reach new and existing customers in a differentiated manner.

## ABOUT TECHNOLOGENT

Technologent is a women-owned, WBENC-certified and global provider of Information Technology solutions and services for Fortune 1000 companies. With our internationally recognized technical and sales team and well-established partnerships between the most cutting-edge technology brands, Technologent powers your business through a combination of foundational IT pillars: Hybrid Cloud & Infrastructure, Digital Automation, Cybersecurity and Data Management. Together with Service Provider Solutions, Financial Services, Professional Services and our people, we’re paving the way for your business operations with advanced problem-solving that isn’t just reactive, but forward-thinking and future-proof.
